emFONE®

Emergency Telephones

- Three Telephone Number Dialing Capability
- Voice Storage to Identify Calling Location
- Remotely Programmable
- Automatic Fault Detection
- Internal/External Speaker and Microphone
- Custom Application Support

CUSTOMISED EMERGENCY TELEPHONE SOLUTIONS

Design-Com Technologies offers a wide range of emergency telephones to suit your requirements. Whether it be a gate entrance, emergency assistance phone, or simply a door entrance phone, the emFONE Range offer an auto-dialing loudspeaking emergency telephone with fully programmable features, in either externally powered or telephone line powered units. Design-Com will work with you to deliver the best result to suit your application.

A remote programmable digital voice message of up to 16 seconds is played upon answer of the call. This is used to identify the calling location to the control center and can be played back at any time by pressing the correct sequence on the remote telephone keypad. The units can auto-dial up to three separate telephone numbers and have two on-board relay outputs, which can be activated remotely by the control centre.

In the event of a telephone line and/or power failure, continuously running self-diagnostic software will identify the fault and a gentle human voice will alert people of the fault detected and ask them to report it to management.

EMERGENCY LED LIGHTING BACKUP

With the push for more energy efficient solutions the EL-50W is designed to suit the emerging market demand of LED Lighting, the EL-50W will power 12V LED Lamps from 1W to 50W.

For more information on the EL-50W, please visit our website, www.designcom.com.au or click below to download the product brochure.
